

Object-centric alignments and process discovery run offline, as an explanatory second layer — never the safety-critical first evaluator.

Six separate kinds of truth

Source / evidence
what raw material was received

Definition
what the approved version required

Observation
what happened, to which objects, when

Assignment
why this pathway applied to this patient

Measurement
how observation compared with definition

Review / action
what an authorised reviewer concluded

*No table, API, or interface may collapse
these into one status flag.*
